EpiTag™

DIGITAL FOOD LABELS

Real-time digital food labels built for modern foodservice environments.

EpiTag™ Digital Food Labels combine e-ink displays and a radio frequency base station to show price, product, nutrients, and allergens with menu labeling icons right next to products themselves.

AUTOMATED, CLOUD-BASED UPDATES

Epicure's Centra Cloud Server connects directly to your CBORD, Computrition or other foodservice and nutrition management software to pull real-time product, pricing, and promotional data throughout the day. Updates are processed by the EpiTag Cloud Server and delivered automatically to each EpiTag Digital Food Label.

SECURE WIRELESS COMMUNICATION

A Dynamic Communicator transmits compressed image updates to every EpiTag using a proprietary RF protocol built for reliability in high-traffic environments.

- Secure two-way communication
- Resilient to Wi-Fi, Bluetooth, and other 2.4GHz interference
- Coverage up to 50,000 sq ft *(placement dependent)*
- Optional Range Extenders for expanded coverage, redundancy, or faster updates

Dynamic Communicators support Power over Ethernet (PoE), eliminating the need for separate power outlets and reducing installation complexity and cost.

HIGH-VISIBILITY, LOW-POWER DISPLAYS

All EpiTags deliver clear, professional presentation with minimal power usage.

THREE DISPLAY COLORS
black, paper-white, and red or yellow

NEAR 180° VIEW ANGLE

REPLACEABLE BATTERIES
lasting up to five years
based on three updates per day

WHY CHOOSE EpiTag™

EpiTag™ ensures accurate, consistent pricing and menus across all displays while reducing labor through automated updates. Scalable for any size facility, the system includes built-in device monitoring and delivers a clean, modern e-ink display that enhances the guest experience.
